

VAMSHI GUTHA

Bridgeport, CT | +1 (475) 349-3075 | vamshigutha@gmail.com | [LinkedIn](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

- Full Stack Java Developer with 4 years of experience building enterprise web applications across retail, e-commerce, insurance, financial services, energy utility, and CRM platforms for U.S.-based application environments.
- Skilled in Java 17, J2EE, Spring Boot, Spring Security, REST APIs, React.js, TypeScript, Node.js, PostgreSQL, SQL Server, MongoDB, AWS, Docker, GitHub Actions, and Agile Scrum delivery.
- Experienced in developing backend microservices, responsive frontend screens, secure API integrations, database-driven workflows, CI/CD pipelines, Salesforce CRM features, and AI-assisted application capabilities.
- Improved application performance, release quality, data accuracy, and workflow efficiency by up to 40% through API optimization, database tuning, production debugging, automated testing, and cross-functional delivery.

TECHNICAL SKILLS

Programming Languages: Java, JavaScript, TypeScript, SQL, Python, Apex

Backend Technologies: Java 17, J2EE, Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, RESTful APIs, Microservices, Node.js, Express.js, OAuth2, JWT

Frontend Technologies: React.js, Next.js, Angular, Redux, React Hooks, HTML5, CSS3, Tailwind CSS, Bootstrap, Responsive Web Design

Databases & Data Access: PostgreSQL, SQL Server, MySQL, MongoDB, SOQL, SOSL, Query Optimization, Database Design, Indexing

Cloud, DevOps & Deployment: AWS (EC2, S3), Microsoft Azure, Docker, Git, GitHub, GitHub Actions, CI/CD Pipelines, Vercel

Testing & Quality Engineering: JUnit, Mockito, Jest, Mocha, Chai, Postman, Unit Testing, Integration Testing, API Testing

AI & Developer Productivity: OpenAI API, Gemini API, Claude, GitHub Copilot, Cursor, AI-Assisted Development, Prompt Engineering

Salesforce & Enterprise Integration: Salesforce CRM, Apex, Lightning Web Components (LWC), Custom REST APIs, Salesforce Integration

Development Tools & Methodologies: Jira, Agile Scrum, SDLC, Code Reviews, Debugging, Performance Optimization, Production Support

PROFESSIONAL EXPERIENCE

Full Stack Java Developer

Feb 2025 - Present

Macy's | New York, NY

- Developed Java 17 and Spring Boot services for catalog browsing, cart updates, checkout validation, order tracking, and customer account workflows, improving transaction stability by 30% during high-traffic retail periods.
- Enhanced React.js and TypeScript storefront screens with reusable UI patterns, product cards, cart views, checkout forms, and responsive layouts, reducing page interaction delays by 28%.
- Integrated RESTful APIs between frontend, inventory, order, customer profile, notification, and document workflow services, improving product availability and order status accuracy by 26%.
- Built AI-assisted product support logic using OpenAI API, Gemini API, and Spring Boot service layers to summarize customer queries, improve search relevance, and reduce support handoff effort by 23%.
- Secured customer account, order history, checkout, and service request workflows using Spring Security, OAuth2, JWT, Hibernate, and role-based access controls, reducing validation defects by 23%.
- Optimized PostgreSQL and SQL Server queries, indexes, joins, stored queries, and service-layer data access logic for catalog search, product filters, order modules, and customer service workflows, improving retrieval speed by 32%.
- Automated CI/CD deployment and test validation steps using Docker, GitHub Actions, AWS EC2, AWS S3, Git, GitHub, JUnit, Mockito, and Postman, cutting release preparation effort by 35%.
- Partnered with product owners, QA engineers, UX teams, architects, and business analysts during Agile planning, story refinement, defect triage, and production support, reducing requirement rework by 24%.

Software Development Engineer II

Jun 2022 - Jul 2023

CG Infinity | India

- Delivered full-stack utility platform features using Java, Spring Boot, React.js, Salesforce CRM, Apex, LWC, and REST APIs for account service, billing, and service request workflows, improving customer self-service completion by 34%.
- Designed integration logic between Java services, React.js interfaces, Salesforce objects, and custom REST APIs to synchronize account, billing, and case data, increasing workflow efficiency by 40%.
- Configured Lightning Web Components and Apex controllers for account service, case updates, customer interaction history, and CRM task workflows, reducing manual Salesforce updates by 31%.
- Reworked SQL Server schemas, indexes, backend queries, and service-layer data access logic for account and billing modules, reducing API load time by 40% across utility transactions.
- Improved React.js component rendering, form validation, routing behavior, and API error handling for service request screens, reducing frontend defects by 26% during QA validation.
- Coordinated with client stakeholders, QA engineers, and business analysts to clarify functional requirements, acceptance criteria, and integration rules, reducing requirement rework by 23%.
- Streamlined GitHub Actions pipelines for frontend, backend, and Salesforce changes with structured Git branching and release checks, reducing manual deployment dependency by 33%.
- Investigated API failures, Salesforce sync issues, billing data mismatches, and production defects using Postman, Git reviews, and debugging logs, improving platform reliability by 28%.

Software Development Engineer I

Jul 2021 - Jun 2022

CG Infinity | India

- Built MERN stack web modules using MongoDB, Express.js, React.js, and Node.js for user management, reporting dashboards, admin workflows, and role-based screens, improving feature delivery speed by 25% across sprint releases.
- Developed responsive frontend screens with React Hooks, JavaScript, HTML5, CSS3, Tailwind CSS, and Bootstrap, improving cross-device usability by 30% and reducing UI adjustment requests during QA review.
- Created Node.js and Express.js REST endpoints for CRUD operations, authentication flows, form submissions, and structured data exchange between React interfaces and MongoDB collections, reducing backend handling issues by 22%.
- Applied MongoDB schema updates, aggregation queries, filters, and indexing logic to improve application data retrieval accuracy by 27% across user, report, and admin-facing modules.
- Tested API endpoints, request payloads, response codes, and UI flows using Postman, Mocha, and Chai, reducing sprint-level QA defects by 20% before release handoff.
- Collaborated with senior developers during Agile ceremonies, pull request reviews, technical discussions, and defect walkthroughs, improving assigned task completion rate by 24% across web application deliverables.
- Refactored reusable React components, route handling, frontend validation logic, and shared utility functions, reducing duplicate code by 29% and improving maintainability for future enhancements.
- Maintained Git branching, code documentation, commit hygiene, and deployment handoff notes for frontend and backend changes, reducing release handoff issues by 21% across team deliverables.

Software Engineer Intern

Apr 2021 - Jun 2021

Cognizant | India

- Completed hands-on Java, J2EE, web development, Salesforce fundamentals, database concepts, and SDLC training, improving enterprise application readiness by 30% across internal assessments.
- Practiced object-oriented programming, collections, exception handling, reusable methods, and debugging techniques in Java, improving coding accuracy by 25% during assigned programming exercises.
- Built prototype web modules using Java, HTML5, CSS3, JavaScript, SQL, and backend validation logic, completing 4 functional demo workflows for internal mentor review.
- Learned Salesforce CRM concepts including Apex basics, data models, platform configuration, and application customization, improving CRM development understanding by 28% during guided exercises.
- Participated in QA reviews, code walkthroughs, and demo sessions with mentors to validate functionality, reducing application logic gaps by 22% before final internal review.
- Documented technical learnings, sample application behavior, issue fixes, and Git-based code changes, improving review clarity by 24% across internship deliverables.

PROJECTS

AI-Assisted Retail Product Discovery Platform

- Built an AI-assisted product discovery feature using Spring Boot, OpenAI API, Gemini API, and PostgreSQL to summarize customer search intent and improve product match accuracy by 27%.
- Developed React.js and TypeScript search result components with API-driven filters, product cards, and relevance indicators, reducing product browsing friction by 24%.
- Deployed backend services on AWS EC2 with structured API logging and performance checks, improving search response consistency by 22% during high-traffic shopping sessions.

Insurance Claims Workflow Modernization

- Built claim intake and policy verification services using Spring Boot, Hibernate, and SQL Server to reduce manual claim review effort by 26% across servicing workflows.
- Developed secure React.js claim screens with Spring Security-backed REST APIs to improve member data access control and reduce validation issues by 23%.
- Added JUnit and Mockito test coverage for claim status, document tracking, and policy lookup flows, lowering release defects by 21% before production handoff.

EDUCATION

Master of Science in Computer Science

Sacred Heart University | USA

Bachelor of Technology in Computer Science & Engineering

Lovely Professional University | India
